SCRAP SHEAR

EXCAVATOR - VR-ER SERIES -

SCRAP SHEAR

MAXIMUM DURABILITY

- Extremely stable housing with low weight
- Speed valve for quick and efficient work
- Blade with trapezoidal profile improves the cutting line
- Innovative adjuster on the jaw
- Replaceable wear parts

VR SERIES

FRD scrap shears are used for demolition of complete steel constructions as well as for reducing on the ground in foundries, garbage dumps, waste recycling. They can be attached to excavators from 2,5 to 110 tonnes operating weight on the stick or boom top.

These Hardox 400 devices are manufactured in FRD quality, which means that safety and reliability is promised even in the toughest applications. The ER series is equipped with a hydraulic rotation for precise positioning.

The EF series - without rotation - is optimized for use on the ground. As a standard, all models are equipped with speed valves for fast working cycles. They have blades with a trapezoidal profile for improving the cutting line and with an innovative adjuster used on the jaw, which allows clearance without manual intervention. The FRD scrap shears are therefore extremely flexible and well equipped for all requirements.
